

9:10 AM

80%

**A simple medically insured electronic
diagnostic tool that could**

save
a patient's life...

It's a go with GreenLight.

The statistics are alarming.

**One in 4 Americans suffers from
some sort of mental illness each year.**

**8.7
million**

**contemplate serious thoughts of suicide.
Many suffer in silence. Only 40 percent
of people with a mental illness receive
the help they need. And there's no easy,
quick, accurate way to assess patients
for mental illness — until now.**

Introducing GreenLight

With GreenLight, physicians can now provide psychological testing anywhere in their office on any web-enabled device.

- ▶ **Fast:** Patients can take the test, which typically takes just 4 - 7 minutes to complete, as they wait for an appointment. Once completed, physicians can view the results immediately to counsel and provide care to patients during the same office visit.
- ▶ **Accurate:** GreenLight tests are the industry standard. And because of the popularity of social media, many patients are more likely to be honest and straightforward about their mental health using our technology compared to a face-to-face meeting.
- ▶ **Accessible:** View reports on any tablet or web-enabled device, or print reports wirelessly to file or download EMR-ready PDFs.

The 3 key reasons to choose GreenLight

1

Improve Patient Care: GreenLight tests serve as a first line of defense, an early warning system for the detection of mental illness. We provide physicians the opportunity to test and establish a baseline for all of their patients. Every completed assessment is potentially a life saved and an opportunity to help your patients find the help they need.

2

Decrease Risk: Increased regulation and legal scrutiny, especially in prescribing pain medication, absolutely demands documentation of mental health testing to protect your practice. GreenLight provides a permanent detailed record of testing to mitigate your risk.

3

Generate Revenue: GreenLight tests are typically covered by insurance, with the potential to generate thousands of dollars in additional revenue for your practice each month. For example, CPT code 96103 covers computer administered psychological testing to encourage physicians to use these new tools in the diagnosis of mental health.

We provide electronic testing to help you assess, diagnose and monitor a variety of mental health issues, including:

- Depression
- Anxiety
- Opioid Risk
- PTSD
- Attention Deficit
- Alcohol Dependence
- Psychosomatic Disorders
- Bipolar Disorder
- Perinatal Depression

GreenLight tests include:

- ORT
- GAD-7
- CESD-R
- PHQ-9
- ASRS
- EPDS
- AUDIT
- BDSS
- PCL-C
- PSEQ

Tests That Pass The Easy-To-Read Test

We've designed GreenLight test results to be user friendly and easy to understand. To help physicians understand the patient's results even more quickly, test results are color-coded based on cognitive learning techniques.

**This assessment is not a substitute for independent medical judgment and is not intended to diagnose or treat any condition. Results should be interpreted by a medical professional and further assessment is needed to determine if a disorder is present. These tools are not intended to give professional medical advice. Physicians and other health care providers should always exercise their own clinical judgment for any given situation.

GreenLight Testimonial

I'm thrilled to work with GreenLight. Treating depression, anxiety, and other mental health issues has always been an important part of my practice. For the past 14 years, I have used paper versions of the gold-standard psychological assessments to help diagnose and monitor these conditions. This method is time-consuming and not reimbursable. GreenLight uses these same assessments, delivered in a more efficient format, producing a concise and fully-interpreted report for the medical record. The presence of these reports in the chart helps reduce my liability by identifying potentially life-threatening suicidal thinking in my patients. GreenLight's system allows me to bill for work I am already doing, generating thousands of dollars a month in additional revenue, without seeing any additional patients.
